1 Introduction

We will plot the emission spectra of the different lamps for which data is provided in the package. We plot side-by-side the lamp output as spectral energy irradiance and as spectral photon irradiance. All spectra are normalized to an area of one under the whole curve.

We define a function to do the actual plotting so as to not repeat code, and to make changes easier in the future.

```
lamp.plotter <- function(lamp.name, w.low=250.0, w.high=900.0, scaled="area"){
  w.length.out <- seq(from=w.low, to=w.high, length.out=300)
  spectrum.data <- calc_source_output(w.length.out=w.length.out, source.name=lamp.name, scaled=scaled, fill=NULL)
  spectrum.data <- na.omit(spectrum.data)
  fig_energy <- ggplot(aes(x=w.length, y=s.e.irrad), data=spectrum.data) + xlim(w.low, w.high) +
    labs(x="Wavelength (nm)", y="Spectral energy irradiance\n(rel. units)", title=lamp.name) +
    geom_line() + stat_peaks(ignore_threshold=0.33, colour="red")
  fig_photon <- ggplot(aes(x=w.length, y=s.q.irrad), data=spectrum.data) + xlim(w.low, w.high) +
    labs(x="Wavelength (nm)", y="Spectral photon irradiance\n(rel. units)", title=lamp.name) +
    geom_line() + stat_peaks(ignore_threshold=0.33, colour="red")

```
